Dear Larry:

I would be happy to provide you with SV40 DNA digested with restriction enzyme from H. influenzae. I have had trouble shipping samples, and think it would be better, if it's convenient for you, to stop by while you are in or near Baltimore. Let me know if ^{32}P label is okay, i.e., if you need it for only a short period of time. You need only 2 or 3,000 counts for a good radioautogram and ^{32}P is very convenient for this.

Best regards,

Daniel Nathans
